

Background

Innovative Computer Solutions is a new company established in December 2004 and located in Mayfield. The business was formed through a merger of three existing businesses which had traded separately in hardware and software for up to five years.

Innovative Computer Solutions was created to allow sharing of expertise and to broaden and standardise the range of services available to our existing clients in Newcastle, the Central Coast and the surrounding areas. As a result of this merger, we have also expanded our operations and are looking to bring the advantages of our skills to a wider customer base.

Customers of note that have enjoyed the benefits of our service so far include a number of government agencies, several local schools, and many local businesses including KFC, The Clarendon Hotel and Coliseum Antiques.

Are you happy with your current IT consultants?

A wide range of skills and experience under one roof

University trained and experienced

The team at IC-Solutions has experience and graduate qualifications covering areas from Computer Science to Electrical Engineering. We not only know how to keep your systems working, but we can explain a PC down to it's base components which allows us to very quickly discern the cause of your problems.

Striving for excellence

Here at IC-Solutions we do not believe that close enough is good enough. In everything we do we strive to excel. This is evident in the success that we have had in previous projects and customer dealings. We do not believe that we should leave something broken so you need to call us again. When we leave a job we leave in the belief that you should not need to call us again until you want something done.

Wide range of skills

Thanks partly to our varied backgrounds and the merger of the three different businesses the team at IC-Solutions have all had exposure to different systems and skills. By merging into one entity we can now offer you the benefits of this diversity. Whether you have only a few Windows based workstations, or a work force spanning multiple locations and operating systems, or even server farms on the other side of the world, our staff has had the experience to help you.

All under one roof

Regardless of your IT needs we can do it all from one shop. Whether it be network administration or software design or implementation, our team has the skills required to transform your problems into your solutions.

Why don't you call us today?

Ten reasons why you should choose Innovative Computer Solutions for your business:

- **Superior service:** We take the time to ensure that you do understand.
- **Low prices:** We don't believe in specials. Our prices are well below retail every day, meaning no rushed decisions to catch that fleeting bargain.
- **Experience:** We are university trained and have the experience to back it up, so you know we can keep your business running smoothly.
- **Stability:** Our former partners have been in business for years. We are not going to disappear tomorrow.
- **Know how:** We have been trained to the highest standard, and strive to stay on top of tomorrow's innovations. Let us do the hard yards for you.
- **Lateral Thinking:** Much of our training is in software and hardware design, meaning lateral thinking is part of our very being. Innovation comes naturally to us.
- **Problem Solving:** Thanks to our experience and software design background, problem solving is a natural step for us. No problem is too big or too small.
- **Commitment:** We are resolved to provide you with the very best that we can. We want to see your business succeed.
- **No Fuss:** We do not believe in playing games in business. All our practices are straight forward with no reading between the lines.
- **Locally owned and operated:** We are local, just like you and want to see locals supporting locals.
